Mimic Alert
CSMP-10

Overview

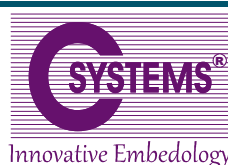

Mimic Alert Fire alarm Mimic panel is a microprocessor based intelligent control panel that can accept up to 10 zones per control card. This offers more capability to the extensive options already offered by any Fire Alarm panel which provides programmable control relay modules. The CSMP-10 is the master PCB which can control up to 10 outputs. If further outputs are required, CSMP-10 can be integrated with the master PCB offering a total outputs of 50. The CSMP-10 can be looped and has inbuilt power supply of 12V / 1ADC.

The flexibility of these boards is further enhanced by the fact that, when a zone control relay module gets activated, the corresponding LED in the panel will get illuminated and a audible buzzer gets activated. A "Mute" button in the panel is used to silence the buzzer sound.

Also the "Test Button" in the panel is used to test the healthy state of all the LED's in the mimic panel.

Specification	
Dimension	A3 (297 x 420 x 60mm). other size on request
Material	MS sheet metal with siemens gray colour
Zones	multiples of 10 (each pcb has 10 outputs)
Output	Hi Bright RED Led
power supply	12V @ 1A DC SMPS (Inbuilt)
Floor Plan representation	Auto CAD drawing
Alarm	Audible Buzzer
Control	Mute & Lamp Test Button
